AI CAREER COACH FOR INTERNATIONAL STUDENTS

CareerBridge

From "I study in Latvia" to "I work in Latvia"

Aykhan Dadashov · ISMA, Information Systems · Web Technologies · 11.11.2026

One coach that gets international students hired

Problem	About 11,900 international students study in Latvia, but fewer than half of non-EU graduates stay to work here.
Solution	CareerBridge: four AI agents that fix your CV, find jobs you can actually take, research the company and train you for the interview.
Market	Start with ~7,000 non-EU students in Latvia, then the Baltics and the EU.
Model	Free for students, Pro €4.99 / month, licences for universities, paid job posts for employers.
Ask	Pilot with ISMA's career centre in spring 2027 and an incubator grant to build the MVP.

Students come, but talent leaves

11,900

international students in Latvia in 2025/26 [1]

43%

of non-EU graduates stayed to work or look for work in 2024, down from 58% in 2022 [2]

20 h

per week: the work limit for bachelor students during term [3]

Non-EU graduates more often work in less qualified jobs than Latvian graduates [2]

Why is this a problem?

Wrong CV format – local recruiters expect a different CV than at home

Language wall – many ads need Latvian; English-friendly jobs are hard to find

No network – students don't know which companies hire foreigners

Rules – unsure about work hours and permits, employers are unsure too

Why CareerBridge exists

Mission

Give every international student in Latvia a personal career coach that makes them job-ready, so their talent is used here.

Vision

By 2030, the go-to career platform for international students in the Baltics and Europe.

Objective

Close the gap between studying and working: better CVs, honest job matching and real interview practice, using AI agents with a human in control.

Goals for the first year

1,500
students using it

+20
points CV score on average

30%
get an interview in 6 weeks

3
partner universities

A team of four AI agents, one goal: your first job

CV Agent

Scores your CV for a job, explains what is missing and rewrites bullet points in the local style.

1

Job Scout

Finds jobs you can really take: English OK, 20 h/week for students, hybrid, junior. Shows a match %.

2

Company Brief

Writes a short cited brief about the company before you apply or interview (STORM-style).

3

Interview Coach

Mock interviews in chat with feedback on clarity, relevance and the STAR structure.

4

Human in control: CareerBridge never applies or sends anything by itself. The student approves every CV and every application, and a human career advisor reviews hard cases.

How it is built

Web app

Next.js + Tailwind CSS · responsive, works on the phone

API and agents

NestJS (Node.js) · agent orchestration with LangGraph · Claude LLM API

Data

PostgreSQL + pgvector (CV and job embeddings) · job board APIs · web search for STORM briefs

Analytics with PostHog · GDPR: data stored in the EU, the user can delete everything

Ideas taken from the repos I reviewed

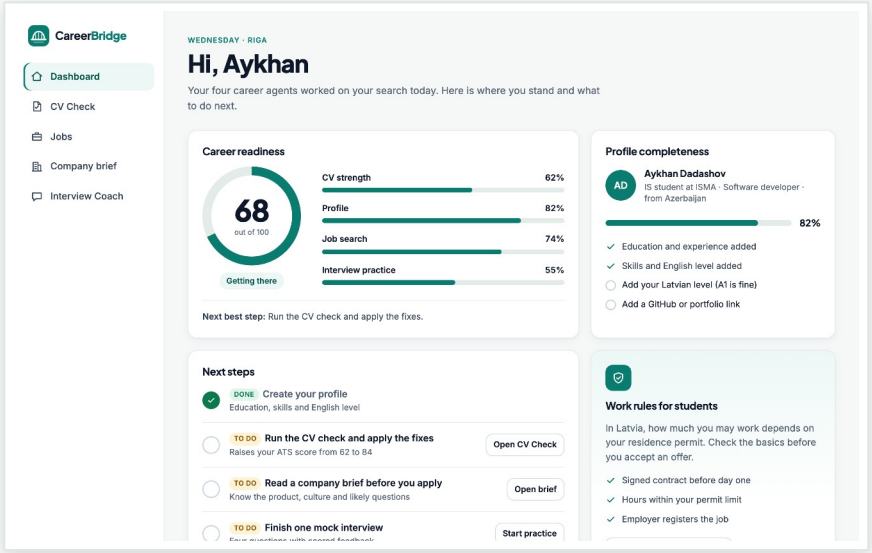

awesome-llm-apps – the recruitment agent team, turned around for job seekers

STORM – research, outline and cited writing for company briefs

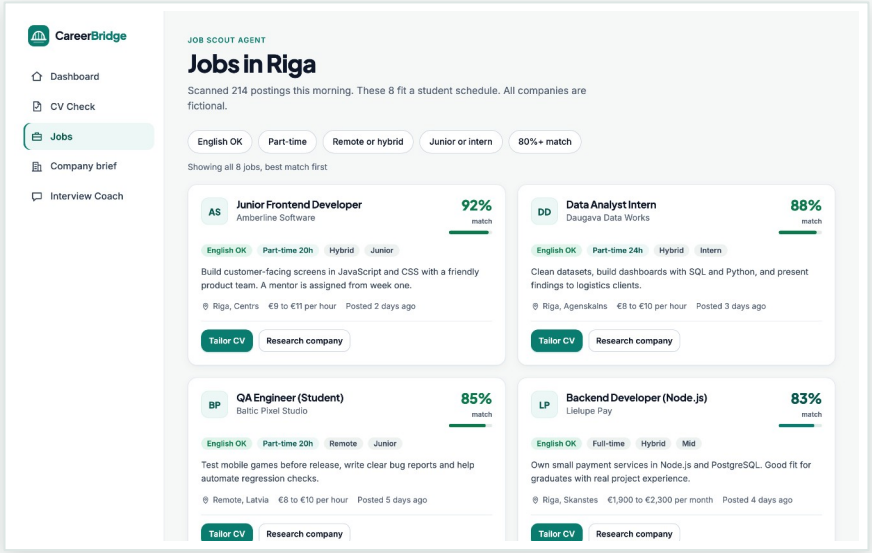

ai-employees / markus – agents with roles, logs and human approval

novel-agent – a review loop with scores before output

Clickable prototype

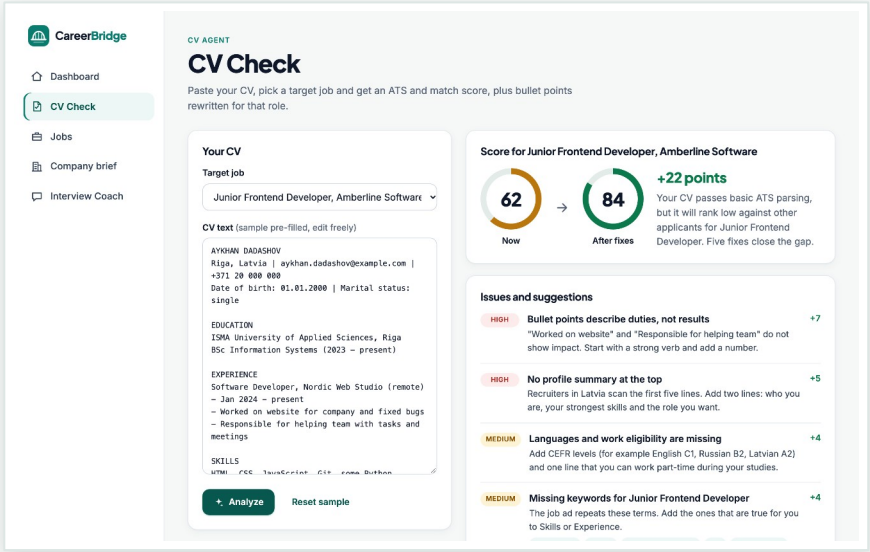

Dashboard: readiness score, next steps and what each agent did

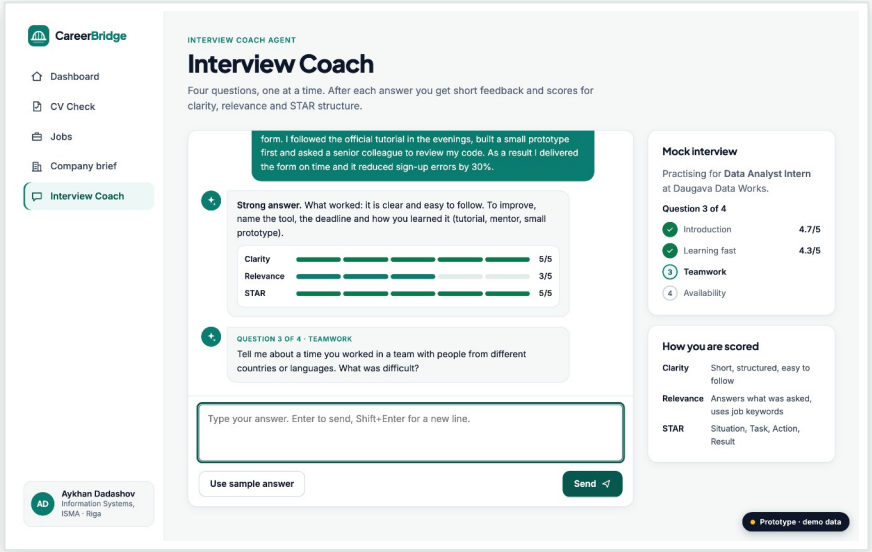

Jobs: match %, filters for English and student hours

[Live demo: ayxan1110.github.io/careerbridge-prototype](ayxan1110.github.io/careerbridge-prototype)

CV check and interview coach

CV Agent: score 62 → 84, with the issues to fix

Interview Coach: feedback and scores after every answer

From sign-up to job offer

1. Sign up	2. CV check	3. Match	4. Prepare	5. Apply	6. Feedback
student status and visa type are checked	AI score + fixes, student approves	only jobs the student can legally take	company brief + mock interview	student sends, we track the result	outcome improves the next matches

Screening for employers

Employers get a shortlist of candidates whose skills match the job and whose work hours and permit fit. The student decides if their profile is shared.

Quality checks

Every AI output is scored by a reviewer agent first. Facts in a CV must come from the student's own data, the AI cannot invent experience.

Value for every side

Students

- A CV that local recruiters understand
- Jobs that fit their hours and language
- Confidence before interviews
- Free core version

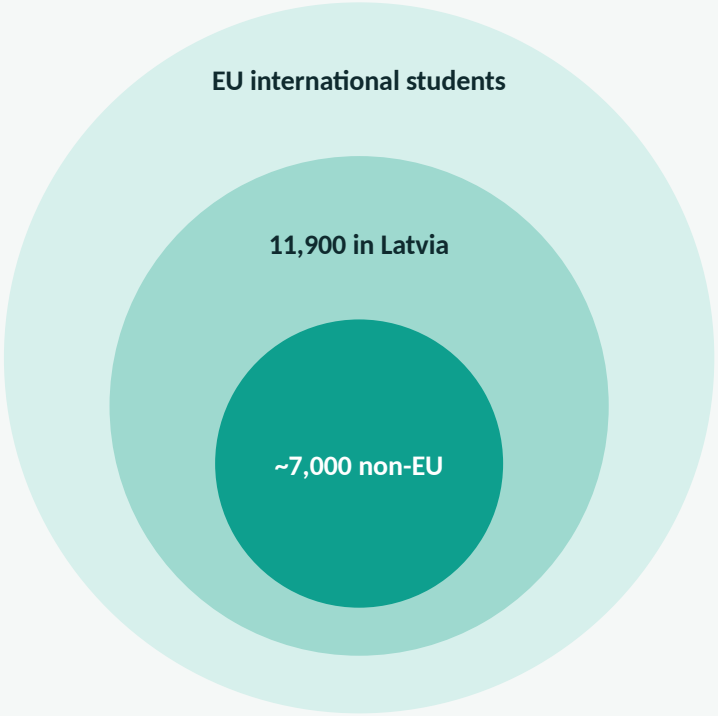

Universities

- Better graduate employment numbers
- Career support that scales to 1,000s of students
- Reports for international offices

Employers

- Pre-screened, ready candidates
- Clear info on work rights
- Access to English-speaking talent

Who are the users?

Bachelor students
need part-time jobs (20 h/week) and their first CV

Master students
career entry, internships and full-time roles

Fresh graduates
need a job to stay: the biggest pain

Top origins
India, Uzbekistan, Ukraine, Sri Lanka (2024 graduates)

Sources: Invest Latvia; BICEPS via LETA (2025). EU market = next step, not counted yet.

SWOT analysis

S

Strengths

- Founder is an international student and a developer
- AI makes coaching cheap and available 24/7
- Focus on local rules and language

W

Weaknesses

- Small home market
- Depends on LLM API costs and quality
- No brand yet

O

Opportunities

- Labour shortage, especially in IT
- Universities need better employment numbers
- Same problem in every EU country

T

Threats

- Stricter migration rules for students
- LinkedIn or job boards add similar AI tools
- AI mistakes could hurt trust

Reach students where they already are

University partners

Career centres and international offices recommend it at orientation week

Student ambassadors

One ambassador per big community: Indian, Uzbek, Sri Lankan, Ukrainian students

Short videos

TikTok / Instagram Reels: "fix my CV in 60 seconds" before-and-after

Community chats

Helpful posts in WhatsApp and Telegram groups of each nationality

LinkedIn

Success stories of students who got hired, tagging the employers

Referral

Invite a friend, both get one month of Pro for free

Products and prices

STUDENTS

Free

€0

- CV score and 3 fixes
- Job Scout with filters
- 1 mock interview / month

STUDENTS

Pro

€4.99 / month

- Unlimited CV rewrites
- Company briefs
- Unlimited interview coach

UNIVERSITIES

Campus

from €3,000 / year

- Pro for all students
- Dashboard and reports
- Branding for the career centre

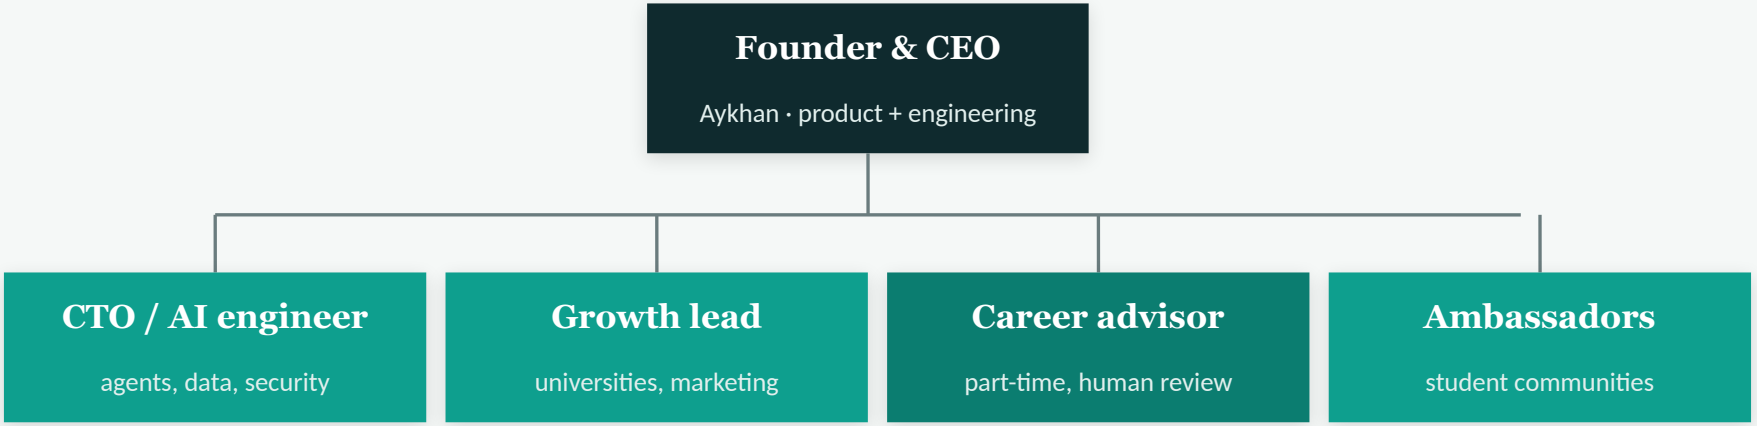

EMPLOYERS

Hire

€99 / job post

- Job post to matched students
- Pre-screened shortlist
- Work-rights info pack

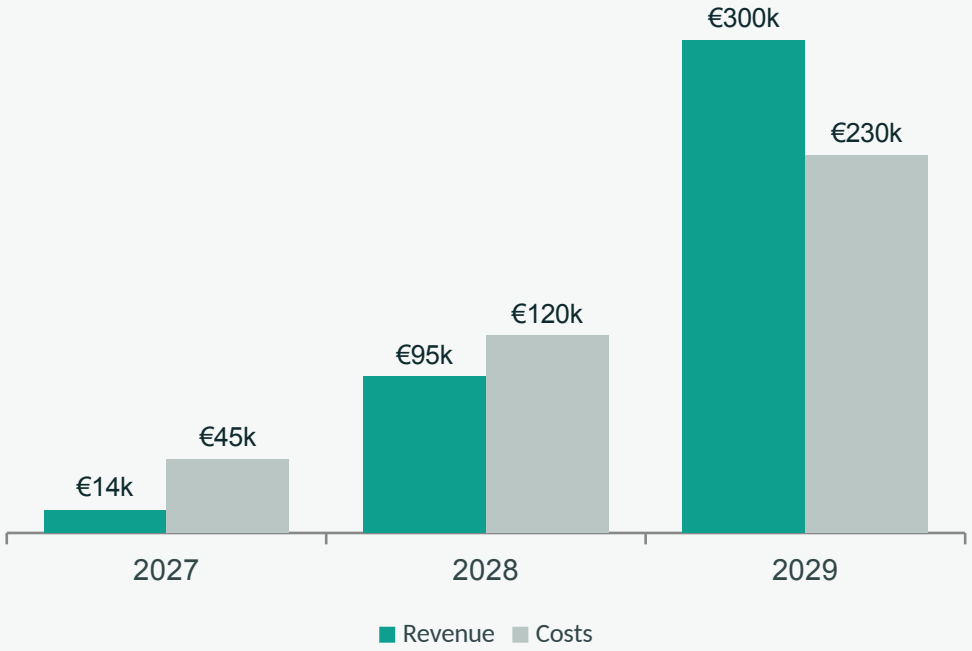

A small human team plus AI "employees"

AI team (works 24/7, every action logged and approved by a human)

- CV Agent
- Job Scout
- Company Research
- Interview Coach
- Reviewer Agent

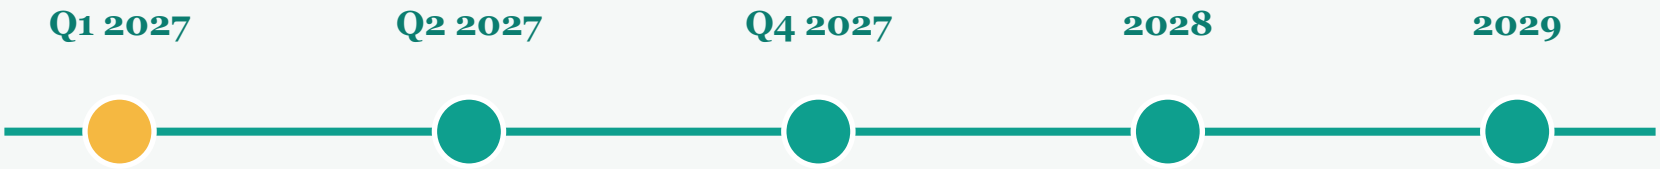

Financial plan (first 3 years, estimates)

	2027	2028	2029
Users	1,500	8,000	25,000
Pro (10%)	€6k	€40k	€150k
Universities	€6k	€40k	€90k
Employers	€2k	€15k	€60k
Revenue	**€14k**	**€95k**	**€300k**
Costs	**€45k**	**€120k**	**€230k**

Costs = AI API (~€0.50 per active user / month), hosting, marketing, salaries from 2028. Year 1 is funded by an incubator grant and a university pilot. Break-even in 2029.

Business development roadmap

MVP

CV Agent + Job Scout, pilot at ISMA

Coach

Interview Coach + Company Research

Campus

3 universities in Riga, employer portal

Baltics

Estonia and Lithuania, mobile app

EU

Poland and Germany, break-even

Expected results and impact on society

Result / output

A working prototype today. After the pilot: students with job-ready CVs, more interviews, and data on which skills employers in Latvia want from international graduates.

User audience

International students and graduates in Latvia, their universities' career centres, and employers that hire English-speaking talent.

Impact on society

Talent that Latvia educated stays and works here, which helps the labour shortage and pays back the investment in education. Graduates work at their real level, not below it, and integrate faster. And the same approach can help international students in every EU country.

CONCLUSION

Why me, why now

Career — It joins my two worlds: building AI and semantic search as a developer, and living the problem as an international student.

Society — Latvia needs skilled people, and thousands of them are already here, studying.

Now — AI agents finally make personal coaching cheap enough to give to every student.

Thank you! Questions?

The GitHub repositories I reviewed

Repository	What it is	What I use
awesome-llm-apps	100+ runnable AI agent and RAG apps (Apache-2.0, very active)	Recruitment agent team, turned around for job seekers
awesome-llm	Reading list of LLM papers, models and tools	Tool choices: LangChain, Ollama, Ragas for evaluation
ai-employees	AI "employee" kits with roles, schedules and approvals	Human approval before anything is sent
markus	Platform for AI agent teams with review and trust levels	Reviewer agent and task review flow
storm	Stanford: researches a topic and writes a cited article	Cited company briefs
novel-agent	LangGraph agents that write and review novel chapters	Score-based review loop
Claude-Book	Novel writing with Claude Code agents and a style "bible"	Fixed style guide for consistent CVs
